## Reference Notes

## Color Brochures available for \$7.00 each

**1.** Can be used as a ‘body stain’ at high temperatures, all of the brown colors can but used as ‘body stains’ but will vary in shade considerably depending on the composition of the body and temperature at which it is fired

**1A.** Use only as ‘body stain’

Firing temperature can only be a rough guide. Firing at 2200F on a slow schedule may give the equivalent firing maturing as firing at 2300F on a fast schedule. The cycle, atmosphere, and rate of cooling will all affect the color

**2.** Max firing limit of 2156F (1180C)

**3.** Max firing limit of 2300F (1260C)

**4.** Max firing limit of 1976F (1080C)

Zinc oxide influences the color in a glaze more than other elements. Generally, zincless glazes should not contain magnesium oxide. Some colors containing zinc are to be used in a zincless glaze. The zinc in the color is in a combined form and will not harm the color, but free zinc oxide in the glaze can destroy the color.

**5.** Do not use zinc in glaze.

**6.** May be used with or without zinc.

**7.** Zinc may not be necessary, but gives better results.

**8.** Best results with not zinc.

Calcium oxide contents as calcium carbonate should be between 12-15% for the best color development. Adding the molecular equivalent of calcium oxide with Wollastonite, a natural calcium, silicate, often gives better uniformity, the increased silica from the Wollastonite must be subtracted or the glaze will have a poor surface/

**9.** Glaze must contain 6.7 – 8.4% CaO (12-15% CaCO<sub>3</sub>)

# Fire Top Raku Kiln

## By Tom Clarke

Dakota Potters Supply is proud to introduce the Fire Top Raku Kilns.

The truly unique design of the Fire Top kiln is the brain child of potter, inventor. Tom Clarke of Dakota Potters Supply of Sioux Falls, SD. This rectangular raku kiln offers the ultimate in temperature control as the heat spirals evenly around the chamber. Fire Top's size and front access door makes firing even the largest pieces a breeze. Some of Fire Top's features include; 7" fuel, wind resistant burner port, easy access front door, peepholes both front and back for easy viewing, and mounts for the thermocouple to protect it from damage. The majority of metal parts that could be exposed to heat and flame have been neatly covered by our long lasting 2400 degree in a wool blanket. Comes with a 20' high pressure regulator hose.

# Brent Wheels

Electronic speed controls, permanent magnet DC motors and all steel construction are used in our variable speed power wheels (A, B, C, CXC and 16). By varying the speed of the motor electronically, mechanical speed changing systems are eliminated and the foot pedal can be moved about to suit the individual. The reliable control circuit uses high quality components and can withstand a 15-amp load (models CXC, C). Models A and B can withstand a 10-amp load. Our foot pedal is the smoothest in the industry, with speed range from 0 to 240 rpm and exceptional power.

All these wheels are equipped with automatic belt tensioning and belt guards. The steel tables for B, C and CXC are welded from 1/4-inch steel plate for weight and rigidity. All Brent wheels have a cleanable, drip-free working surface. Electric wheels also available in 220 volts, 50 cycle (European Wiring).

## MODULAR CONTROL BOX FEATURING

- Convenient Connections
- Easier to Service
- Reversing Plug
- Improved Torque
- Improved Response

The new control box, now standard on Brent® B, C, and CXC wheels features connectors for the foot pedal and motor. If the foot pedal or motor ever need service or replacement, simply unplug them from the control box. In addition, the motor connector is bi-directional. The new control box also improves torque at lower speeds and provides greater foot pedal response.

## Slab Rollers

North Star Slab Rollers are made in two series: The Standard series used by hobby potters and students everywhere and the massive Super series, at home in industrial, institutional and production settings around the world. The most obvious differences are these: Standard machines are made in '18", 24" and, 30" widths. They have rolls 2 1/2" in diameter, tables are 48" long with the roller in the center and the handle drives the bottom roll directly. Super machines are much heavier, tables are 72" long, rolls are 4" in diameter, there is a 4.33:1 steel gear reduction between handle and roll. They are made 24", 30" and 36" wide, and they come only with a Wagon Wheel handle. All North Star machines have two rolls, much like the wringer of an old-fashioned washing machine. Both rolls have a small diamond pattern ("knurling") machined directly into the metal to grip the canvas. The bottom roll is turned by the handle, but cannot move vertically. As it turns, it drives the top roll through a train of gears. The upper roll both turns and can be adjusted up and down. The two rolls turning together pull slabs through easily, and the vertical adjustment of the top roll gives an easy-to-set and infinitely adjustable thickness from paper-thin to over 2 inches. A reference scale allows setting and repeating openings to within 1/100 of an inch. The design gives great flexibility in making slabs. Very thin, translucent porcelain slabs and thick, heavily textured architectural slabs are equally easy. A wide variety of other texturing materials and objects can be passed through the machine along with the clay. Slabs can be rolled either direction or reversed on all North Star machines.

## Skutt Wheel

Skutt is the only company we know of that uses a Continuous Duty motor. These motors are tested under much more rigorous conditions so they need to be built tougher. That means heavy duty components that can stand up to the strain students (and big pot potter's) can subject them to. Sometimes bigger is better. People are always talking about how smooth our motors run. One reason for this is how we adjust the setting on the controller in the factory. We turn the torque setting all the way up (because it can handle it) and most importantly, we turn something called IR Comp completely off. IR Comp is a controller function that attempts to keep the wheel head speed consistent when you apply resistance. Most people will be fine with a 1/3 HP motor, but, if you are throwing big stuff you might want to step up to the 1/2 HP or 1HP motor.

### **Prodigy \$1,950.00**

# Olympic Kilns

## Call for Pricing

### Gas Kilns

Olympic Kilns builds powerful gas production kilns for potters and businesses. Users are provided with equipment that handles large capacity loads with ease, and best of all is affordable.

Gas kilns are the sports car of kilns. They fire to high temperatures, are high-powered, and provide the capability to do techniques that cannot be duplicated in an electric kiln such as reduction.

Available options include a digital pyrometer, high limit controller, stainless-steel or galvanized vent hood, rotating door, and upgrading to a car kiln.

### Raku Kilns/Torchbearer Updraft

Olympic Raku & Torchbearer gas kilns bisque, high fire (cone 10), reduce, and raku. Olympic updraft gas kilns are constructed from durable firebrick and are equipped with venturi burner systems to ensure even temperature firings. Olympic Raku gas kilns are specially designed for raku work by retaining heat in the firing chamber when elevated by the turn of a hand winch, allowing easy access, while trapping the heat in the kiln and away from the operator. Models can be purchased with burners only or with the option of a burner system which includes an ignition to light multiple burners at one point, maintain the flame on each burner and re-ignite any burner that may extinguish.

### Electric Kilns

Olympic Kilns builds affordable, powerful electric kilns for industrial, commercial, and production volume use. They offer a variety of front-loading or top-loading kilns that can run on 208, 240 or 480 volts. There are a variety of sizes and shapes available including stackable and oval kilns.

### Manual Kilns

**A Models:** The A models are square, top loading manual kilns. The A series are great for the beginner.

**B Models:** These kilns are polygon, top loading manually controlled. The B model kilns offered today are equipped with Kiln-Sitter® timers. On the B models, the Cress Clean Air System (fan) pre-wiring is only available on certain sizes at an additional cost.

**C Models:** These kilns are square top loading or front-loading kilns with gray sheet steel outer skins. The kilns are usually manually controlled (see description above of the B model kilns) but are also offered with electronic controls or with the Firemate® control system.

### Digital Kilns

The Cress E-Series electronic kiln features the most advanced electronic control on the market. It provides 5 (rather than 3) preset easy-to-use firing speeds, plus available custom programming capability, for an almost infinitely flexible range of firing profiles. Most “E” series kilns now have 3-zone capable controls, but are initially connected up for one zone. This keeps maintenance to a minimum using one thermocouple instead of three. Temperature uniformity is superb by design and not brute force. Three-zone temperature controls may be ordered at additional cost at the time order is placed. Cress is now the first to include heat reflective stands to greatly reduce the floor temperature when firing.

### Firemate Automatic Kilns

The Cress firemate is the most popular automatic kiln on the market today. Its design has been patented in 16 countries for its excellent and unique control system, which gradually increases power to the kiln throughout the firing process.

This provides the advantages of firing as rapidly as possible without heat shocking the ware, and are extremely energy efficient. The firemate even senses and adjust for room temperature and small voltage variations to give you highly repeatable and consistent firing results. The elements are electrically adjusted from top to bottom to give the most uniform firing possible.

The firemate automatically turns the kiln up when you are busy and forget. You have control; fire automatically or fire manually it is simple to operate. These kilns include: Dawson kiln sitter & limit timer, superior lid brace, two position lid venting prop, insulated peephole plugs, instruction manual and permanently attached instruction plate, patented Cress Firemate control with reduced heat-shock firing curve, thumbwheel power adjustment, auto/manual firing mode switch, heavy gage elements electrically trimmed for superior temperature uniformity, pre-assembled kiln stand, lifting handles, steel bottom safety plate, adjustable case clamps reinforced lid band, professional packing for safe deliver

## KM Series

The KilnMaster line of kilns gives you two ways to achieve precise firings time after time. Cone Fire Mode uses sophisticated software to run preset programs which are based on the Speed and Cone Value you enter. The Cone Fire Mode even calculates the perfect ending temperature based on how fast or slow the kiln is firing. Ramp/Hold Mode lets you design and store your own firing programs of up to eight segments. You are in total control of the heating and the cooling rates. Both programming modes offer the ability to Pre-Heat, hold at peak temperature, Delay firings, set Temperature Alarms, review programs, and View program status.

NEW – KilnMaster Touchscreen Option

All Production Series, KilnMaster and GlassMaster models that use a full-size touchpad may now be ordered with the new KilnMaster or GlassMaster Touchscreen Controller. The only difference between a KilnMaster Touchscreen Controller and a GlassMaster Touchscreen Controller is the GMT Controller ships with the Ceramic programs turned off to protect you from over firing your kiln.

# Leaves

Creating leaf impressions in clay has never been easier. These silicon rubber leaf mats are designed to create realistic leaf impressions in clay and can be used to also create applique pieces. Each leaf is made by hand and therefore is slightly unique from the next, just like real leaves. The veins in these rubber leaves are more pronounced than on real leaves to help transfer the patterns into clay. Often times impressions made with real leaves are covered or distorted by glaze, but the deeper grooves made by these rubber leaf mats will help prevent that distortion.

## Gleco Trap

Discontinued (In Stock Only)

The Gleco Trap provides you with an economical plumbing trap that is easily installed and maintained. The Gleco Trap is connected below the sink and collects solids in a bottle, which has a fill line. When the solids reach the fill line, the trap is drained through a valve, the bottle is exchanged with a replacement bottle, the valve shut and the trap is back in service. Bottle exchange is rapid and done without the need of tools (less than 2 minutes!). Most of all, there is no mess and less chance of water spillage.

All Complete Packages come with the following materials to aid with installation:
